

# Stop violence against women and girls

## INTRODUCTION:

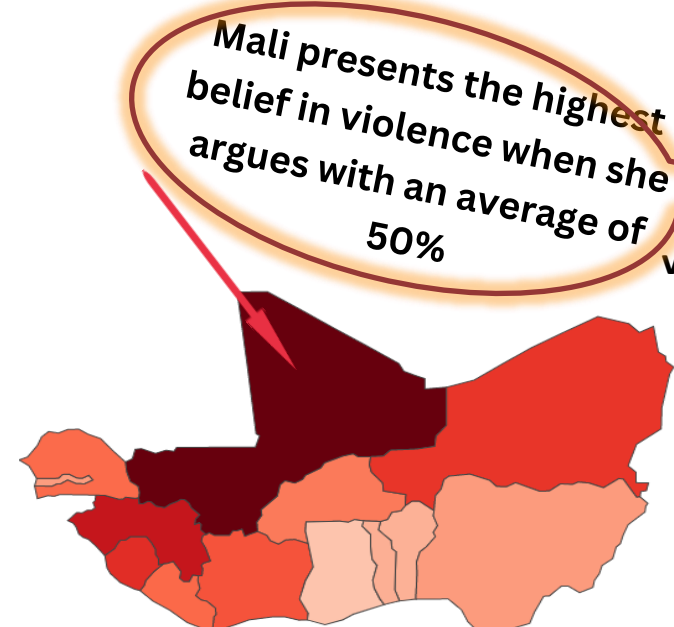

Violence against women and girls is a serious issue affecting millions of people worldwide. This poster compares demographics such as age, education level, marital status, and location versus belief in violence. Further analysis into the countries in West Africa where the major causes investigated in this study are prevalent was done with the aid of choropleth maps. The use of visualizations has been effective in communicating this information and can inform the development of effective strategies for prevention and intervention

## Average belief in violence by demographic

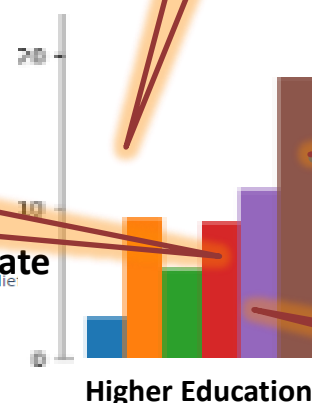

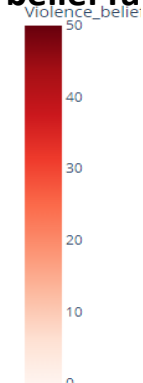

## Demographic group of respondents

Average violence belief in West Africa when she argues

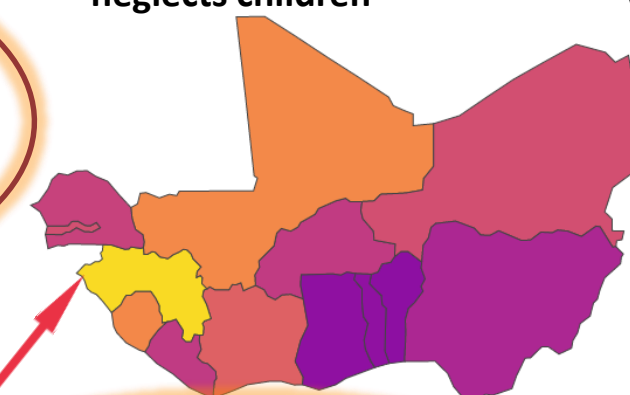

violence belief rate

Higher Education gave the least value for belief in violence (<20%) of all the demographic group, this shows the positive impact Education has on violence

'Other' tops the chart consistently across all demographic groups, which means there might be more serious causes of violence not investigated in this study
